Paths to Funding: One Successful Example

Stephenie C. Lemon
Prevention Research Center
Division of Preventive and Behavioral Medicine
UMass Worcester
Background

• Obtaining NIH and other large research grants is more challenging than ever
  o Compelling pilot data is essential

• Taking advantage of opportunities
  o In-kind projects
  o Small, local grants for program implementation
Purpose of this talk

• To describe important elements of a successful preliminary studies section

• To share a recent example of leveraging a small pilot study and in-kind on the fly activities to inform a successful NIH grant application
What type of pilot data are needed?

- Understanding specific experiences of the target population and setting
- Program development
  - Materials and protocols
- Measurement development and adaptation
- Feasibility
  - Integration of a program within an existing setting
  - Recruitment and retention methods
  - Program attendance and adherence
  - Fidelity of program delivery
- Preliminary effectiveness
- Sample size and power estimates
Research goal

To adapt an evidence-based weight loss program that could be successfully implemented for low-income postpartum mothers by the Women Infants and Children Program
Collaboration

• UMMS:
  o Milagros C. Rosal
  o Stephenie Lemon
  o Barbara Estabrook
  o Karen Ronayne
  o Linda Olson
  o Amy Borg
  o Caroline Cranos

• Women, Infant and Children’s Program
  o Nelly Driscoll
  o Oahn Nguyen
  o Other WIC staff

• Worcester Youth Center

• YWCA

Trainees:

Christine David
Lynn DiTaranto

Nutritionists:
Julie Demoracski
Julia Cassavant

Peers:
Amy Robinson
Rosa Lima
Phase I: Understanding Specific Experiences of the Target Population and Setting
Needs assessment

• **Goal**: To understand the socio-demographic profile and prevalence of obesity in the target population

Method/Source of Data:
• Existing WIC surveillance data
Target population

Goal: To understand weight-related attitudes, motivations and behaviors, challenges to weight control and potentially useful strategies to promote weight loss

Methods:
• Focus groups with participants (in-kind, institutional resources)
• Key informant interviews with WIC directors and senior nutritionists (in-kind)
Target setting

Goal: To understand how an intervention and a research protocol might be developed to fit within the flow of WIC daily business, including:

- Intervention design and format
- Roles and responsibilities
- “Flow”

Method: Key informant interviews with WIC directors and senior nutritionists (in-kind)
Phase II: Program Development
Protocol development

• **Goal:** To adapt an evidence-based intervention based on information learned in Phase I

**Methods:**

• Systematic intervention mapping process (in-kind)
• Focus groups with WIC clients (in-kind; institutional resources)
Phase III: Measurement Development and Adaptation
Evaluation

Goal: To ensure that measures of behaviors and theoretical constructs are appropriate for the target population

Method: Cognitive pre-testing with WIC clients (in-kind)
Phase IV: Feasibility, Preliminary Effectiveness, Sample Size Estimation
Pilot trial

Goal: To establish the feasibility and preliminary effective of the intervention and to generate sample size estimates for a fully powered trial.

Method: Single group pre-post test design among 60 women; Systematic tracking system and process evaluation (UMMHC Community Benefits)
Final “product” and results

• **Recruitment and assessment procedures**
  o All women receive eligibility forms and give permission for contact during routine visits
  o Research staff then assume responsibility

• **Intervention**
  o Group-based
  o Delivered by WIC nutritionists and peer leaders in the evenings
  o Evidence-based content modified to reflect values of new Moms

• **Outcomes**
  o Demonstrated meaningful weight loss outcomes
  o Process was feasible and acceptable to WIC
  o Intervention was well-received by the women
The next step...

- Recently funded: Randomized controlled trial
  - Modifications based on lessons learned in the preliminary studies

- Funded by the National Institute of Minority Health and Health Disparity

- Part of the Center for Health Equity Intervention Research
