NCATS Introduces Plans for New Single IRB Reliance Platform

On May 2, 2016, NCATS held a workshop for Clinical and Translational Science Awards (CTSA) Program representatives and other innovators in clinical research management to educate them about using its new single institutional review board (IRB) reliance platform for multisite clinical studies. The NCATS Streamlined, Multisite, Accelerated Resources for Trials (SMART) IRB Reliance Platform is based on the successful experiences of NIH single IRB initiatives and on CTSA Program demonstration projects using a model called IRBrely. Designed to be a flexible platform that will enable harmonization and streamlining of processes, the NCATS SMART IRB Reliance Platform will be a key component of NCATS' Trial Innovation Network. In addition, NCATS intends for the platform to serve as a roadmap for the nation to help implement NIH's policy on single IRB use in multisite studies and as a resource for clinical researchers who conduct these studies.

Academic Job Search Series

Provided by the UMMS Center for Biomedical Career Development

Part 2: Writing Your Statement of Teaching Philosophy
Monday, July 18, 2016
12:00 - 2:00 pm
S2-310, 2nd floor conference room, UMMS

Part 3: Preparing for the Interview Visit
Part 4: Negotiating Your Startup Package
Wednesday, August 10, 2016
Part 3, 10:00 - 11:30 am
Part 4, 11:30 am - 1:00 pm
S2-310, 2nd floor conference room, UMMS

Teaching of Tomorrow (TOT)
Enhancing Clinical Teaching Skills through Discourse and Practice
Sponsored by the Clinical Faculty Development Center,
UMass Medical School
4-Day Course to be held on:
November 18-19, 2016 AND March 10-11, 2017

Teaching of Tomorrow (TOT) is a nationally recognized and highly acclaimed Faculty Development Program for preceptors of medical students and residents. First offered in 1994, this program is presented...
Sharing Our Stories - Just Like NIH

Sally Gore, MS, MSLIS  
Research Evaluation Analyst, UMCCTS

Carrie Wolinetz, Ph.D., Associate Director for Science Policy at NIH begins her June 1 blog post with the following:

Let me pose a simple question - how do we know if NIH is achieving its mission? It's tricky enough to assess how effective we are at generating fundamental scientific knowledge, though we have a decent grasp on that side of the equation. We can link tens of thousands of biomedical research articles published each year to the NIH grants that supported them. But can we take it a few sizeable steps further and systematically connect our research efforts to advances in human health? And how can we use what we learn to design policies and strategies to speed innovation and biomedical progress?

Here at the UMCCTS, we ask ourselves the same questions and we grapple with the same trickiness of the situation to find the right answers. One thing that NIH has done to address the issue is launch a website, Impact of NIH Research, and more recently, added the "Our Stories" section to it. The section debuted this month with 3 case studies:

DID YOU KNOW?

PubMed Health

Sally Gore, MS, MSLIS  
Research Evaluation Analyst, UMCCTS

It's hard to imagine that there are many readers of this newsletter who don't know about PubMed, but do you know PubMed Health? PubMed Health (PMH) is another resource from the National Center for Biotechnology Information (NCBI), a division of the National Library of Medicine (NLM). Its goal is to provide clinicians and patients with fast, easy access to credible health information on the prevention and treatment of diseases and conditions. Focusing on clinical effectiveness research, it specializes in collecting and indexing systematic reviews of clinical trials - both the full versions, as well as summaries that are easier for the public to understand. A number of authoritative sources provide the reviews to PMH including the Agency for Healthcare Research and Quality (AHRQ), the National Cancer Institute, the Department of Veterans Affairs, and Cochrane, the latter being the gold standard of systematic reviews. The database goes back to approximately 2003 and is updated daily with new reviews and articles. If you're looking for a quick way to locate reviews of clinical trials, next time remember to try PubMed Health.

EVENTS

June 2016 Events

http://escholarship.umassmed.edu/umccts_news/vol2016/iss6/1
Alex K. Shalek, PhD
Hermann L.F. Von Helmholtz Career Development Professor, HST
Assistant Professor, Department of Chemistry, MIT (http://shalek.wpengine.com/)

"Immunology from the 'Bottom-Up' with Single-Cell Genomics"

Thursday, June 16, 2016
11:00 am
Albert Sherman Center, 6th Floor Conference Room AS6-2072
University of Massachusetts Medical School

Host: Manuel Garber, PhD, Associate Professor Bioinformatics and Integrative Biology; Director, Bioinformatics Core, UMMS

Raj Kalkeri, PhD
Project Leader, In Vitro Antiviral Drug Development, Department of Infectious Disease Research, Southern Research Institute

Pharma experience includes Vertex Pharmaceuticals

Pharmacological Studies: Not Just a "Furry Test Tube"

Thursday, June 16, 2016

Albert Sherman Center
Multi-Purpose Room EAST, 1st floor
University of Massachusetts Medical School

4:00 - 5:00 pm - Lecture and Case Study
5:00 - 5:30 pm - Networking (refreshments served)

Lecture and Case Study: This lecture will discuss why the FDA requires animal models for most therapeutic indications and what we hope to learn from animal studies that we can't learn from in vitro experiments in a test tube. The speaker will discuss the limitations of animal models and ethical considerations in the use of animals, from zebra fish to non-human primates. The speaker will also describe the development of an animal model for drug discovery, how it was used and what was learned.

Registration is still open. Register today or walk-in. You're welcome to join.

This event will be a great opportunity for networking and collaboration too!
Molecular Medicine Distinguished Lecture

Evan Rosen, MD, PhD
Professor of Medicine
Beth Israel Deaconess Medical Center
Harvard Medical School
Evan Rosen Laboratory

"Epigenomic Approaches to Adipose Tissue Biology"

Thursday, June 30, 2016
12:00 pm
Molecular Medicine Seminar Room, 3rd Floor
Biotech II, 373 Plantation Street, UMMS, Worcester, MA

Host: Michael Czech, PhD, Chair and Professor, Program in Molecular Medicine, UMMS

Human Research Protection Program (HRPP)
Upcoming Educational Opportunities

Clinical Research Professionals Group (CRPG) Meetings:
- Thursday, July 14, 2016
  1:00 - 2:00 pm
  Hiatt Auditorium, S1-608, UMMS, Worcester
- Friday, August 12, 2016
  10:00 - 11:00 am
  Hiatt Auditorium, S1-608, UMMS, Worcester

FUNDING and TRAINING OPPORTUNITIES

Pipeline to Proposals Awards Initiative
Call for Letters of Intent

The Patient-Centered Outcomes Research Institute (PCORI) is seeking Letters of Intent for Independent Tier III projects through their Pipeline to Proposals Awards Initiative. This program supports the development of research proposals designed by research partnerships of researchers, patients, caregivers, and other healthcare stakeholders.

The purpose of the Pipeline to Proposals Initiative is to cultivate the development of proposals with sound scientific rigor and robust patient engagement. PCORI expects the Pipeline to Proposals project will help individuals strengthen collaborations that can produce meaningful research proposals. Applicants must be research partnerships including at least one patient and at least one researcher. Up to $50,000 for up to a Nine-Month Project Term.

Deadline for submitting a letter of intent is Thursday, June 30, 2016

Solicitation of Assays for the
UMASS-Chemical Screening Initiative

The UMASS-Chemical Screening Initiative (UMASS-CSI) provides investigators access to experienced professional and state-of-the-art technological resources at the Small Molecule Screening Facility (SMSF) for the discovery of exceptional chemical probes, potential diagnostic and therapeutic candidates of high impact, as well as research tools. The program is funded by the UMass Office of the President's Science and Technology Fund.

The objective of this solicitation is to invite applicants with a well-developed assay used in basic research and therapeutic development programs suitable for HTS to submit the assay for consideration by the UMASS-CSI to identify hits and probes from the SMSF compound library.

**Tier 1 projects** encompassing pilot experiments would be awarded $7,250 each for screening any library of choice, up to a total of 5,000 compounds (e.g., a partial Diversity set and/or a combination of the LOPAC and international drug collection to name a few)

**Tier 2 projects** would involve comprehensive screening of the entire 58,000 compound library. Tier 2 projects would be awarded $22,500 each.

**Proposal Deadline:** July 1, 2016

**Do you have a transformational advancement in diabetes research?**

The Diabetes Innovation Challenge is now seeking qualified applicants for an exciting competition!

T1D Exchange and M2D2 are pleased to announce an open competition to identify and accelerate transformational advancements in diabetes research and care.

The Diabetes Innovation Challenge will provide up to **two awards of up to $150,000 in cash or in-kind services** provided by T1D Exchange, M2D2, and Challenge sponsors, including JDRF, the leading global organization funding type 1 diabetes research.

**July 8, 2016 - Deadline to submit initial application**

---

**World Without Disease QuickFire Challenges**

Johnson & Johnson Innovation and Janssen Pharmaceuticals, Inc. are looking for the best idea, technology or solution to **award $500,000**. The JLABS QuickFire Challenges are competitions designed to attract game-changing, early-stage innovation in the Therapeutics, Consumer, Health Technologies and Med Device sectors. Winners will be awarded a variety of prizes (including cash and/or lab space), benefit from world-class lab facilities, be supported by an onsite team and have access to a global network of industry experts and programming.

**Deadline to apply is August 31, 2016**

Transdisciplinary Training in Cardiovascular Research (T32)
UMass Center for Clinical and Translational Science Newsletter, Vol. 2016 [2016], Iss. 6, Art. 1

UMass has a cardiovascular T32 training grant entitled "Transdisciplinary Training in Cardiovascular Research" under the direction and senior leadership of Drs. Catarina Kiefe and John Keaney. The program represents a wonderful opportunity for the institution to promote the entire spectrum (T0-T2+) of cardiovascular research on our campus. We are writing to request applications from trainees who wish to become part of this exciting program at the postdoctoral level. New trainees will join 4 other current trainees in the program.

Duration of support: Funding for two years of support provided. Trainees may apply for an additional year.

Amount of support: Based upon the NIH stipend schedule as outlined in the link below. Faculty sponsors may, at their discretion and with department and institutional approval supplement the NIH stipend, but only from a non-federal, non-sponsored funding source. [http://grants.nih.gov/grants/guide/notice-files/NOT-QD-15-048.html](http://grants.nih.gov/grants/guide/notice-files/NOT-QD-15-048.html)

Proposals are accepted on a rolling basis.

Allied Minds and Bristol-Myers Squibb announce...

CATALYST is an exciting new program launched by Allied-Bristol Life Sciences (ABLS), a joint venture of global pharmaceutical company Bristol-Myers Squibb and venture builder Allied Minds, to identify and develop commercially-promising biopharmaceutical innovations from leading universities and research institutions. Launched in 2014, ABLS provides world-class expertise in drug development, access to a fully integrated drug discovery and development center (with medicinal chemistry, biological assays, animal models, pharmacology, toxicology capabilities, etc.) as well as seasoned management and the necessary financial backing to bring transformational academic discoveries to patients.

ELIGIBILITY
The Principal Investigator of a CATALYST proposal must be available to collaborate with ABLS in the translation of their discovery.

SELECTION CRITERIA AND PROCESS

- Successful proposals will have elucidated novel and differentiated mechanisms, supported by strong scientific validation, underlying disease states of strategic interest (see below). Priority will be given to those projects where initial lead molecules have already been identified and possess the potential to deliver first-in class drug candidates.
- Proposals are accepted on a rolling basis. Proposals submitted by the 1st of each month are reviewed on or before the 28th of the same month. PIs of selected proposals will be invited to present their projects to the CATALYST Steering Committee. If your project is selected, we will work efficiently with you to finalize the research plan, budget, and necessary agreements.

Cont...Sharing Our Stories - Just Like NIH

- Childhood Hib Vaccines: Nearly Eliminating the Threat of Bacterial Meningitis
- Neurostimulation Technologies: Harnessing Electricity To Treat Lost Neural Function
- Fighting Cancer: Ushering in a New Era of Molecular Medicine

Each of these resources provides a concise overview and informative graphic that tells the story of when and how the particular research achieved its goal(s). As a package, they can be used to inform NIH's stakeholders of the concrete impact that its research had on human health.

The UMCCCTS also seeks to collect and track the information needed to tell our own stories of success. The
Performance Metrics page on our website summarizes and complements the many progress reports we receive from the cores and programs we sponsor, helping us to better show the impact of the clinical and translational science being done across the 5 UMass campuses. They can be downloaded and shared with stakeholders when needed, to show how our programs advance scientific and clinical knowledge, and make a difference in improving health.

We’re always looking for stories to tell and are happy to help you come up with your own. Please explore what’s been accomplished to date and consider adding your stories to the big picture.

The UMass Center for Clinical and Translational Science (UMCCTS) was founded in 2006 to enhance clinical and translational research across the five University of Massachusetts campuses and our clinical partner, UMass Memorial Health Care. With the receipt of an NIH Clinical and Translational Science Award (CTSA) in 2010, and its successful renewal in 2015, the UMCCTS joined a network of 62 NIH-funded centers collaborating to transform the conduct of clinical and translational research across the U.S. Other key partners include our patients and communities, foundations, biotechnology and pharmaceutical companies, and members of the venture capital and philanthropic communities.

We encourage you to browse through our website to learn more about how the UMCCTS catalyzes clinical and translational research through education and training, pilot funding programs, cores, and services.

Please remember to cite the CTSA Grant # UL1-TR001453 in all supported journal publications.
