Academic Libraries are striving to provide access to resources without necessarily requiring users to go through the library website. The trend of licensing services or tools to provide access to library resources like OpenURL link resolvers or LibGuides will likely continue in academic libraries. Users often go to Google to begin their research. Usage data provided by resource vendors may be limited, and vendors do not provide other analytics data.

Within the next five years, all information discovery will begin at Google, including discovery of library resources. The continuing disaggregation of content from its original container will cause a revolution in resource discovery.

Within the next five years, our users will meet more than 90% of their information needs from sources that are not directly connected to the library. Data will be pushed out to many starting places on the Web and directly to users.
