We started this project to:
• build a community around open science and computational research
• establish relationships with researchers in the sciences
• increase awareness of new library services
• and learn about the technologies researchers are using on campus

Mozilla’s Study Group initiative is community led. There are over 20 Study Groups on 6 continents devoted to skill sharing, idea discovery, and providing community support. BU’s Study Group is facilitated by the BU Libraries. Community members lead sessions, help with logistics, and set the agenda. Sessions are informal and leaders are encouraged to “go with the flow” and to engage the audience where it is.

Both the Mozilla Science Lab and the BU Libraries are deeply engaged with making knowledge and research open and accessible. The Mozilla Science Lab helps “scientists and researchers to work openly and do better research, more research, and make that research more useful by sharing it widely.”[1] The BU Libraries “are responsible for not only the curation and dissemination of information, but facilitating learning and knowledge creation.”[2] We think this partnership helps both parties accomplish their mission.
