MEDICAL STUDIES INDICATE

MOST PEOPLE SUFFER

A 68% HEARING LOSS WHEN NAKED.

GETTING THE MOST OUT OF A VISIT TO THE DOCTOR'S OFFICE

- Take a friend, someone who will help you remember important information.
- Educate yourself. Seek trustworthy information about illnesses or conditions that affect you.
- Be up-front. Tell your doctors everything, or they might miss something important.
- You have to ask in order to receive. If you want answers, you have to ask questions.

At United Health Foundation, we believe that the more you know, the healthier you will be. Which is why we partnered with the NATIONAL HEALTH COUNCIL to bring you these important health tips. We encourage you to get more involved in your care, to seek out information and to always make sure that the information you use comes from a reliable, evidence-based source. To find out more on this and other important topics, visit UNHealthTips.org.

United Health Foundation
Fill in the blanks

One out of ? American adults reads at the 5th grade level or below.

one out of 5

The average American reads at the 8th to 9th grade level, yet most health care materials are written above the ? grade level.

10th grade

Ask questions. Prioritize questions.
Tracking health

- Seven in ten U.S adults track a health indicator for themselves or a loved one.
- People living with chronic conditions are significantly more likely to track a health indicator or symptom.
- Tracking can affect someone’s overall approach to health.
- Tracking has had a significant impact on people living with chronic condition.

Many factors affect your health. Some you cannot control, such as your genetic makeup or your age. But you can make changes to your lifestyle. By taking steps toward healthy living, you can help reduce your risk of heart disease, cancer, stroke and other serious diseases:

- Get the screening tests you need
- Maintain a healthy weight
- Eat a variety of healthy foods, and limit calories and saturated fat
- Be physically active
- Control your blood pressure and cholesterol
- Don’t smoke
- Protect yourself from too much sun
- Drink alcohol in moderation, or don’t drink at all

1. Healthy Living (National Library of Medicine)
Vivir saludablemente
Otros nombres: Prevenir enfermedades

Introducción

Muchos factores afectan su salud. Algunos no se pueden controlar, como la constitución genética o la edad. Pero usted puede modificar su estilo de vida. Al iniciar acciones hacia una vida saludable, usted ayuda a reducir su riesgo de enfermedad cardíaca, cáncer, derrame cerebral y otras enfermedades serias. Por ejemplo:

- Consulte a un médico para realizarse chequeos periódicos, no solamente cuando se enferme.
- Mantenga un peso saludable.
- Consuma alimentos sanos y variados y limite las calorías y las grasas saturadas.
- Haga actividades físicas.
- Controle su presión arterial y el colesterol.
- Deje de fumar.
- Protejase del exceso de sol.
Breast cancer affects one in eight women during their lives. Breast cancer kills more women in the United States than any cancer except lung cancer. No one knows why some women get breast cancer, but there are a number of risk factors. Risks that you cannot change include:

- Age - the chance of getting breast cancer rises as a woman gets older
- Genes - there are two genes, BRCA1 and BRCA2, that greatly increase the risk. Women who have family members with breast or ovarian cancer may wish to be tested
- Personal factors - beginning periods before age 12 or going through menopause after age 55

Other risks include being overweight, using hormone replacement therapy (also called menopausal hormone therapy), taking birth control pills, drinking alcohol, not having children or having your first child after age 35 or having dense breasts.

Symptoms of breast cancer may include a lump in the breast, a change in size or shape of the breast or discharge from a nipple. Breast self-exam and mammography can help find breast cancer early when it is most treatable. Treatment may consist of radiation, lumpectomy, mastectomy, chemotherapy and hormone therapy.

Men can have breast cancer, too, but the number of cases is small.

Appendectomy

Appendectomy is a surgery to remove the appendix. The appendix is a small pouch that comes off the large intestine. The appendix sometimes gets blocked and becomes infected and swollen. Signs of an infected appendix include abdominal pain in the lower right side, fever, poor appetite, nausea and vomiting. If the appendix bursts, it can make you very sick.

There are two ways to do this surgery:

- **Open appendectomy** - a single incision is made in the abdomen. The doctor works through this larger incision to remove the appendix.

- **Laparoscopic appendectomy** - 3 or 4 small incisions are made in the abdomen. The doctor uses a camera and tools through the small incisions to remove the appendix. With this type of surgery, you may recover faster, have less pain, less scarring, fewer wound problems and often spends less time in the hospital.

Apendicectomia

A apendicectomia é a cirurgia para a retirada do apêndice. O apêndice é uma pequena bolsa acoplada ao intestino grosso. Às vezes, o apêndice é bloqueado, o que o faz infectar e inchar. Os sintomas de infecção no apêndice são dor na parte inferior direita do abdômen, febre, inapetência, náusea e vômitos. Se o apêndice romper, as consequências podem ser graves.

Há duas maneiras de fazer esta cirurgia:

- **Apendicectomia aberta** – Uma única incisão é feita no abdômen. O cirurgião removerá o apêndice através desta incisão maior.

- **Apendicectomia laparoscópica** – São feitas três ou quatro pequenas incisões no abdômen. O cirurgião utiliza uma câmera e instrumentos através das pequenas incisões para remover o apêndice. Este tipo de cirurgia permite que você tenha uma recuperação mais rápida, sinta menos dor; as cicatrizes são menores, há menos problemas associados à cicatrização e na maioria das vezes representa menos tempo no hospital.
How to find multilingual information on MedlinePlus.gov
Cataract - adult

A cataract is a clouding of the lens of the eye.

Causes

The lens of the eye is normally clear. It acts like the lens on a camera, focusing light as it passes to the back of the eye.

Until a person is around age 45, the shape of the lens is able to change. This allows the lens to focus on an object, whether it is close or far away.

As a person ages, proteins in the lens begin to break down. As a result, the lens becomes cloudy. What the eye sees may appear blurry. This condition is known as a cataract.

Factors that may speed cataract formation are:
This photograph shows a cloudy white lens (cataract) over the pupil. Cataracts are a leading cause of decreased vision in older adults, but children may have congenital cataracts. With surgery, the cataract can be removed, a new lens implanted, and the person can usually return home the same day.

The eye is the organ of sight, a nearly spherical hollow globe filled with fluids (humors). The outer layer or tunic (sclera, or white, and cornea) is fibrous and protective. The middle tunic layer (choroid, ciliary body and the iris) is vascular. The innermost layer (the retina) is nervous or sensory. The fluids in the eye are divided by the lens into the vitreous humor (behind the lens) and the aqueous humor (in front of the lens). The lens itself is flexible and suspended by ligaments which allow it to change shape to focus light on the retina, which is composed of sensory neurons.
Cataratas en adultos

Una catarata es una opacidad del cristalino del ojo.

Causas

El cristalino del ojo normalmente es transparente y actúa como una lente en una cámara, enfocando la luz a medida que ésta pasa hasta la parte posterior del ojo.

Hasta los 45 años de edad aproximadamente, la forma del cristalino es capaz de cambiar. Esto permite que el cristalino enfoque sobre un objeto, ya sea que esté cerca o lejos.

A medida que una persona envejece, las proteínas en el cristalino comienzan a descomponerse. En consecuencia, éste se torna opaco. Lo que el ojo ve puede aparecer borroso. Esta afección se conoce como catarata.
Cataracts - what to ask your doctor

You are having a procedure to remove a cataract. A cataract occurs when the lens of the eye becomes cloudy and starts to block vision. Removing the cataract can help improve your vision.

Below are some questions you may want to ask your doctor or nurse to help you take care of your eye after surgery.

Questions

What is a cataract?

How will cataract surgery help my vision?
- If I have cataracts in both eyes, can I have surgery on both eyes at the same time?
- How long after surgery before I notice my vision is better?
- Will I still need glasses after surgery? For distance? For reading?

How do I get ready for surgery?
- When do I need to stop eating and drinking before surgery?
- Should I have a check up with my regular doctor before surgery?
- Do I need to stop taking or change any of my medicines?
- What else do I need to bring with me on the day of surgery?

What happens during cataract surgery?
- How long will the surgery take?

Omega-3 Fatty Acids
pronounced as (oh may' gə)

Why is this medication prescribed?
Omega-3 fatty acids are used together with lifestyle changes (diet, weight-loss, exercise) to reduce the amount of triglycerides (a fat-like substance) in the blood in people with very high triglycerides. Omega-3 fatty acids are in a class of medications called antilipemic or lipid-regulating agents. Omega-3 fatty acids may work by decreasing the amount of triglycerides and other fats made in the liver.

How should this medicine be used?
Prescription omega-3 fatty acids such as omega-3-acid ethyl esters (Lovaza, Omytrig), icosapent ethyl esters (Vascepa), and omega-3-carboxylic acids (Epanova) come as a liquid filled gel capsule to take by mouth. Epanova is usually taken once daily with or without food. Lovaza is usually taken one or two times a day with or without food. Omytrig is usually taken one or two times a day with food. Vascepa is usually taken two times a day with food. Nonprescription omega-3 fatty acids come as gel capsules to take by mouth as directed on the package label. Take omega-3 fatty acids at around the same time(s) every day. Follow the directions on your prescription label or on the package carefully, and ask your doctor or pharmacist to explain any part you do not understand. Take omega-3 fatty acids exactly as directed. Do not take more or less of it or take it more often than prescribed by your doctor.

Swallow the capsules whole; do not split, crush, chew, or dissolve them. If you cannot swallow capsules whole, tell your doctor.

Cómo mantenerse saludable

Conforme se acerca a los años de la vida, se suele comenzar a notar que las actividades que se realizaban con facilidad se hacen más difíciles. Esto es normal y es una señal de que el cuerpo está cambiando. La buena noticia es que hay cosas que se puede hacer para mantenerse saludable.

2. **Dieta saludable**: Comer una dieta rica en frutas, verduras y granos enteros puede ayudar a mantener un peso saludable y reducir el riesgo de enfermedades crónicas. Evitar productos procesados y alto contenido de azúcar y sal también puede ser beneficioso.

3. **Actividad física**: Hacer actividad física regularmente puede ayudar a mantener el peso saludable, mejorar la salud cardiovascular y reducir el riesgo de enfermedades crónicas. Incluso actividad ligera como caminar puede ser beneficioso.

4. **Mentalidad positiva**: Mantener una mentalidad positiva y evitar el estrés puede ayudar a prevenir enfermedades cardiovasculares y mejorar la calidad de vida.

5. **Cuidado dental**: Lavar los dientes dos veces al día con pasta dental puede ayudar a prevenir enfermedades dentales y periodontales. Visitar al dentista regularmente también es importante.

6. **Visita al médico**: Hacer una visita al médico regularmente puede ayudar a detectar cualquier problema de salud temprano. Los exámenes de rutina pueden prevenir enfermedades en la etapa inicial.

7. **Prueba de screening**: Realizar pruebas de screening regularmente puede ayudar a detectar enfermedades en la etapa inicial. Es importante hablar con su médico sobre qué pruebas son necesarias.

8. **Disminuir el consumo de alcohol**: Beber alcohol en exceso puede ser perjudicial para la salud. Disminuir el consumo de alcohol puede ser beneficioso para la salud general.

9. **Consultar con el médico**: Si se siente cansado o no se siente bien, consultar con el médico puede ser beneficioso. El médico puede determinar si hay algo de lo que se debe preocupar.

10. **Evitar tabaco**: Si fuma, pensar en dejar. El tabaco es perjudicial para la salud y puede aumentar el riesgo de enfermedades cardiovasculares y canceres de pulmón.

Recuerde que estos son solo algunos consejos. Algunas personas pueden tener necesidades específicas de atención de salud basadas en factores como la edad, el género, el estado de salud actual y la historia familiar de enfermedades. Hablar con su médico o profesional de la salud es una buena idea para descubrir qué es lo mejor para usted.
Office Workers, On Your Feet!
Report calls for at least 2 hours a day standing on the job

By Mary Elizabeth Dallas
Tuesday, June 2, 2015

TUESDAY, June 2, 2015 (HealthDay News) -- Desk jockeys should make a point to stand up for at least two hours during the workday in order to avoid the negative health consequences linked to too much sitting, new research suggests.

Gradually break up periods of prolonged sitting until you’re on your feet four hours a day, advises a panel of international experts. Aside from taking regular walks throughout the workday, desk-bound employees can opt for sit-stand desks or workstations that require them to stand.

The recommendations are based on an analysis of research that links prolonged periods spent seated with a heightened risk of serious illness and premature death.

"The evidence is clearly emerging that a first behavioral step could be simply to get people standing and moving more frequently as part of their working day," the study authors reported online June 1 in the British Journal of Sports Medicine.

Increasing the amount of time that people stand could be a more achievable goal than encouraging more daily exercise, the researchers said in a journal news release.

The report was commissioned by Public Health England, which is an agency of the U.K. Department of Health, and another British organization, Active Working Community Interest Company.
