The Future of Cardiovascular Epidemiology: Current Trends?

Vasan S. Ramachandran, MD
Principal Investigator, Framingham Heart Study
Director, Echocardiography/Vascular Laboratory
Chief, Preventive Medicine and Epidemiology, Department of Medicine
Professor of Medicine and Epidemiology
Boston University School of Medicine
A Short History of the UMCCTS

2006: UMass Center for Clinical and Translational Science organized

2008: NIH Development Grant

2010: Funded as one of 62 NIH centers nationwide
       $20M / 5 years; CTR infrastructure
       (cores, services, pilot funding)

2015: Renewed funding ($17.3M / 4 years)
Breakthrough Discoveries

Mechanistic Understanding of Disease

Innovative Approaches / Product Pipelines

Transformative Interventions (Patient)

Population Health / Community Impact

Cutting-edge Technologies
The Health System as a Learning Lab

Collaborative Support for Health System as Learning Lab for:

- Research
- Improvement (Quality, Efficiency, Cost)
- Clinical & Translational Science
- Education
- Health systems strengthening and Public Health

Achieved through collaboration on:

- Data warehouse *(integrates clinical/research data)*
- Clinical trial management system
- Policies and procedures (governance, access, security)
Community Engagement and Research

Mission: **Build capacity for community-engaged research**

Builds on our strengths in community engaged research:

- **Community-engaged Research Network models**
  - Urban and rural
- **Five campus-based community-engaged research mentorship and training**
  - Community Research Scientist Program (CRISP)

www.umassmed.edu/ccts/community
MISSION: To increase engagement of special populations in translational research through tailored, culturally responsive strategies.

Special populations are those under-represented in translational research because of age (i.e., pediatrics, geriatrics), race/ethnicity, low socioeconomic status, geographic location (rural or urban), or being Lesbian, Gay, Bisexual, or Transgender (LGBT).

Three service areas:
1. Special Population Consultation: provides support to researchers on how to improve recruitment and retention strategies as part of their research design.
2. Cultural Competency Training: engages community members in training research staff on implementing culturally appropriate approaches during the informed consent process.
3. Community and Patient Participation: hosts research-focused events in the community to strengthen local capacity to respond to critical research needs and participate in research at UMMS.

http://www.umassmed.edu/ccts/sprc/about-us
Clinical Data Portal

http://www.umassmed.edu/it/cdp/
A partnership between community members, the patients being cared for by the health professionals of UMassMemorial Health Care, and the research community at the University of Massachusetts Medical School. People can learn more about research, donate blood samples to the Biorepository, enroll in the Clinical Research Volunteer Database, and participate in clinical research studies.
Human Research Protection Program

Mission: Facilitate excellence in human research by

• Safeguarding and promoting the health and welfare of human research participants

Welcome to the Office of Innovation & Business Development
UMass Medical School

- We are the “Welcome Lobby” for all external and internal parties interested in partnering interactions.
- We catalyze and enable all types of mutually beneficial relationships between our campus and the world—and resolve any issues that may get in the way.
- If you don’t find the information you need on this website or if you have any questions, please contact us right away.

Small Molecule Screening Facility (SMSF)

SMSF helps identify novel biomolecules for various biological processes using biochemical, cell based and *in vivo* approaches.

Established in 2003 and rebooted in 2014 with joint funding from UMCCTS and the Institute for Applied Life Sciences, the SMSF is a joint core between UMMS and UMass Amherst.

- 58,000 pharmacological small molecules collection occupying novel chemical space
- UMass Plant Cell Culture Collection (Monsanto; 1417 phytochemicals)
- In house medicinal chemistry, cheminformatics and molecular modeling expertise for hit to lead progression

Dr. Paul Thompson  
Core Director, Professor BMP

Dr. Sergey Savinov  
Co-Director, Professor at UMass Amherst
Structure Activity Relationship (SAR): Moving the Goal Posts

Thursday, June 16, 2016
Albert Sherman Center
Multi-Purpose Room WEST (1st floor)
University of Massachusetts Medical School

4:00-5:00 pm  LECTURE and CASE STUDY

Lecture and Case Study: This lecture will discuss why the FDA requires animal models for most therapeutic indications and what we hope to learn from animal studies that we can’t learn from in vitro experiments in a test tube. The speaker will discuss the limitations of animal models and ethical considerations in the use of animals, from zebrafish to non-human primates. The speaker will also describe the development of an animal model for drug discovery, how it was used and what was learned.

5:00-5:30 pm  NETWORKING

Massachusetts Facility for High-Resolution Cryo Electron Microscopy opening at UMMS

The state-of-the-art Massachusetts Facility for High-Resolution Cryo Electron Microscopy, the first of its kind in New England, is slated to open at UMass Medical School by year’s end under the direction of cryo-EM expert Chen Xu, Ph.D.

Research at UMMS
