The Challenge of Maintaining our Physician-Scientist Workforce

Terry Flotte, MD
Provost and Dean
UMMS
Disclosure

• I have no actual or potential conflict of interest in relation to this program/presentation.
Value of Physician-Scientists

• Bridge worlds of science and medicine, bringing questions and observations to the “lab” and translating discovery to practice

• Disproportionally represented in leadership positions

• Illustrate justification of funding research for the public
“...no distinction can be made between research and practice. The investigator, obviously, observes, experiments, and judges; so do the physician and surgeon who practice their art in the modern spirit. At bottom the intellectual attitude and processes of the two are—or should be—identical...”
Challenges and Rewards

- Lengthy training
- Delayed gratification
- Reduced income potential
- Competing demands on time
- Competition with research faculty for grants
- Competition with clinical faculty for productivity
- Temptation to over-commit

- Broad view of relevance of their work
- Satisfaction (albeit delayed) of seeing impact
- Enhanced rate of advancement to leadership
- Admiration of colleagues
NIH Appropriations in Current and Constant Dollars

Extramural Research Awards at UMMS: Fiscal Years 2006 - 2016

Extramural Research Awards:

- Fiscal Year 2006: $175.1 million
- Fiscal Year 2007: $174.5 million
- Fiscal Year 2008: $193.6 million
- Fiscal Year 2009: $204.6 million
- Fiscal Year 2010: $248.3 million
- Fiscal Year 2011: $249.7 million
- Fiscal Year 2012: $242.7 million
- Fiscal Year 2013: $244.2 million
- Fiscal Year 2014: $244.2 million
- Fiscal Year 2015: $276.9 million (Projected)
- Fiscal Year 2016: $288.0 million (Projected)

All UMMS Funding minus ARRA
All UMMS Research Funding

(Millions)

Number of Principal Investigators* Supported on NIH Research Project Grants (RPGs) and History of Congressional Appropriations

- Number of Investigators
- History of Congressional Appropriations

Fiscal Year

*Includes contact and multiple principal investigators. Excludes awards made with American Recovery and Reinvestment Act funds.
Research Project Grants
Competing applications, awards, and success rates
Chart 13-14-1. Average Age and Degree Type of First-Time Investigators on R01-Equivalent Grants* (Fiscal Years 1980-2013)**

*The definition of first time investigator has changed over time, and the annual numbers in the chart reflect the first time investigator policies that were in place during those years. R01 Equivalents include activity codes R01, R23, R29, and R37, and beginning in 2008 included DP2 awards to first-time NIH investigators. Not all these activities are in use by NIH every year.

** Excludes American Reinvestment and Recovery Act Awards (ARRA).

* Recruited to UTSW as endowed “Dedman Family Scholar in Clinical Care” in 2012
Summary

- Value of Physician-scientists remains central to mission of academic medicine
- Challenges have stabilized but require ongoing affirmative efforts
- Specific purposeful mechanisms must be developed to ensure ongoing viability of physician-scientist role
