Integrating Recovery-Oriented Practices for Individuals with Co-Occurring Disorders: With Tobacco & Schizophrenia Case Example

Douglas Ziedonis, M.D., M.P.H.
Professor and Chair
Department of Psychiatry
UMass Memorial Medical Center/
University of Massachusetts Medical School
President, UMass Memorial Behavioral Health Services
Professor, Graduate School of Nursing & Graduate
School of Biomedical Sciences

SPARC Webinar Series
Wednesday, October 14th, 2015
Disclosures

- **No financial arrangement or affiliation with pharmaceutical or devise commercial interests**

- **Research/Grants:** National Institutes of Health; SAMHSA; Veterans Affairs; Massachusetts Department of Mental Health; Foundation for Mental Health Excellence; Physicians Foundation

- **Advisory Boards:** RiverMend Health; Skyland Trail

- **Board of Directors:** National Network Depression Centers; UMass Memorial Behavioral Health Services; Community Health Link; Marlborough Hospital; Massachusetts Hospital Association
Learning Objectives:

Learners will be able to:

1) create motivation-based, recovery-oriented treatment plans for co-occurring disorders

2) describe how to integrate recovery-oriented practices into their work, including dual recovery therapy, mindfulness-based interventions, MET, community resources, and 12-Step Facilitation

3) Case Example: Tobacco Use Disorder & Schizophrenia
COD: Common & Complex

- High Rates of COD
- Many Combinations of Psychiatric Diagnoses
- Increased Consequences
Integrated COD Treatment

- COD treatment outcomes improve with integrated treatments, programs, and coordinated systems and services
- Blend Psychosocial Treatments
- Medications for both MI & SA
  - Numerous Resources: SAMHSA Principles, CO-MAP, SAMHSA TIPS, APA & VA practice guidelines
- Recovery Orientation
  - Wellness oriented – tobacco, obesity, & stress
SAMHSA 14 Principles

1. **Engagement**
   - welcome, access, meds & psychosocial treatment, community options and education

2. **Relationship Building**
   - collaborator in recovery process, empathic, hopeful, strength based, process of assessment and reassessment

3. **Shared Decision Making**
   - partnership, prognosis, risks & benefits, understanding of options, document process

HHS Publication No. SMA-12-4689
Shared Decision Making

What Is Right for Me?
A Step-by-Step Approach to Making Important Decisions in Everyday Life

How to Help Someone Make an Important Decision
A Step-by-Step Approach
Shared Decision Making
Online Tool: Tobacco Cessation and choice to use medicine

- Online Interactive Tool for Consumers
- Are you Ready to quit smoking?
- Guides consumer through options, what matters to them, and helps them to make a decision.
- Tool to talk with clinician or loved ones about decision

Psychology of Taking Medications

- “Pills Fix Problems”
- Soothing – Quick
- Switch / Add an addiction in vulnerable individual
- How does it fit in working my program?
- Manage aversion to taking medications once in recovery for addiction
- Substances alter impact of Medications
4. Screening & Assessment
   - mental health, substance use, physical
   - adherence monitoring
   - laboratory findings

5. Assessment of Co-Occurring Disorders
   → Timeline – input from significant others
   → Substance induced disorders
   → Past History, Family History

6. Integrated Interventions
   - both “primary”
   - best practices – psychosocial & meds
### DSM-5 Criteria for Substance Use Disorders: 11 criteria (no abuse or dependence)

\(^a\) DSM-IV Abuse: X = criterion fulfilled
\(^b\) DSM-IV Dependence: X = criterion fulfilled
\(^c\) DSM-5 Substance Use Disorders: X = criterion fulfilled

\(^d\) Criterion for hazardous use

≥1 criterion
≥2 criteria
≥3 criteria

Substance Use Disorders (SUD)

- 11 criteria
- Severity (3 levels):
  - Mild: 2-3 symptoms
  - Moderate: 4-5
  - Severe: >6
- No poly-substance category
- Each substance a unique disorder

Ongoing COD Assessments: Dual Recovery Status Exam

- Assess current mental status
  - Psychiatric symptoms & withdrawal symptoms
- Assess last substance use
  - Cravings/thoughts
- Assess for motivational level/changes
- Assess treatment involvement
  - Medication compliance
  - Therapy
  - 12-step/recovery activities
Integrated Psychosocial: Dual Recovery Therapy

- Integrate and modify 4 traditional addiction psychosocial treatments
  - Motivational Enhancement Therapy
  - Relapse prevention
  - 12-Step facilitation
  - Mindfulness based interventions

- Blend evidence-based mental illness treatments
  - CBT
  - Social Skills Training

- Individual, group, couples, family therapy

- Many subtype examples: Seeking Safety, etc
MISSION-VET Implementation Materials

• DRT in MISSION
• www.missionmodel.org

• The Treatment Manual & The Consumer Workbook
7. Treatment Readiness
   - likely different levels of motivation
   - monitor for relapse

8. Interdisciplinary Communication
   - regular communication, team orientation, consistent message

9. Integrated Treatment
   - individualized treatment plan through person-centered planning process
Case Example #1: Schizophrenia & Tobacco Use Disorder

● 39 year old male patient
  → Doesn’t want to quit now, but willing to listen
  → Stable on Olanzapine 20mg per day
  → Other medical problems: obesity & hypertension

● Medical Examination
  → Expired CO = 43
  → BP 132 / 82

● Social and Family Histories:
  → Single & lives in group home with many smokers
  → No history of alcohol or drug use
  → Drinks 8 cups of coffee per day
Assessment & Treatment Plan

- Mental Health Assessment – MSE, meds, strengths
- Tobacco Use Assessment (Current & Past)
  → What using? how much?
  → Heaviness scale: TTF & Cig/day
  → Assess patterns of use – triggers, associations
  → CO meter or cotinine level
- Past quit attempts
- Current motivational level to quit / to engage in treatment
- Support or lack of support – social network
- Other medications, caffeine, substances & medical problems
Emerging Tobacco Products: Smokeless Tobacco Products

Electronic Cigarettes (E-Cigs)
E-Cigarette

- Not FDA approved
- Not proven as cessation aides – patients may use
- Could be harmful &/or addictive
- Attracting adolescents
  - Thousands of flavors, including candy, chocolate, bubble gum
- Technologically appealing
- Cost
  - $140 one month supply
Emerging Tobacco Products

- Hookahs and water pipes
- Little cigars

CIGARETTE
LITTLE CIGAR
CIGARILLO (TIPPED)
CIGARILLO
CIGAR
Past Quit Attempts

- Create timeline → Dates for each quit attempt
- Reason for quit attempt
- Method used to quit
- Duration using that method
- Withdrawal symptoms
- Understanding of relapse
Case - Tobacco History

- Started smoking at age 14
- Smokes 40 cigarettes per day
- Smokes in middle of night at times
- Smoke first cigarettes in 1 minute of waking
- 3 previous quit attempts
  - Quit for 4 weeks as part of acute hospitalization
  - Gum didn’t work 3 years ago
  - Tried Patch to quit about 9 months ago
    - Smoked with patch
- Currently ambivalent about starting to quit now
Assessing Motivation to Change

● Assessment strategies:
  → Importance, readiness, and confidence rulers
  → DARN-C (Desire, Ability, Reason, Need, and Commitment)
  → Decisional balance
  → Time-line/quit date
  → Counter-transference and non-verbal cues

● What level of motivation? Precontemplation, contemplation, preparation, action, maintenance

● Formal tools: SOCRATES and URICA

Treatment Plan

- Schizophrenia to problem list
- Add Tobacco Use Disorder to problem list
  → Consider motivational level
- Educational materials
  → Resources (Health and other consequences/benefits)
- Psychosocial treatment
  → What can you integrate?
- Medication treatment
  → Monotherapy
  → Combination therapy
- Community resources
Strategies for Lower-Motivated

- Feedback Tools & MET
- Behavioral Disconnects
- Wellness and Recovery Groups
  → Learning About Healthy Living Groups
- Nicotine Anonymous
Personalized Feedback: What Matters

- Carbon monoxide meter score and feedback
  → Big impact on patients
  → Short- & long-term benefits to quit

- Yearly cost of cigarettes

- Medical conditions affected by tobacco

- Links with other substance abuse & relapses

Advise: Relevance of Quitting

● Personalize the message
  → Better health
  → Fresher breath
  → More money
  → Role model
  → Freedom
  → More energy

● Impact on their family and social life
  → Environmental tobacco smoke
    (pets, friends, family, children, etc)

● Financial
  → Fewer sick days from work
  → Cost of cigarettes
MET = MI + Feedback

- Motivational Interviewing (Style)
  - Empathy, respects readiness to change, embraces ambivalence, and directive
  - OARS: Open-ended questions; affirmations; reflective listening; summaries

- Personalized Feedback (Content)
  - Assessment, including motivational level
  - Decisional balance: pros and cons
  - Personalized feedback
  - Change plan, shared decision-making, and menu of options

MET = Motivational interviewing and personalized feedback
Learning About Healthy Living

Free Online Resource
For Lower & Higher Motivated
Case Continues:

- Excellent progress in LAHL group & your use of personalized feedback. Now interested to quit and willing to try medications. Modify the Treatment Plan

- What Medication, Psychosocial Treatments, Community Resources would you consider?
10. Pharmacological Strategies & Drug Interaction / Toxicity

11. Medications & Crossover Benefits

12. Risk / Benefit Assessment
13. Coordinated Treatment Approach
   - medical comorbidities
   - coordinated treatments

14. Relapse Prevention
   - monitor signs of relapse
   - relapse analysis
Updated Treatment Plan

- Schizophrenia & Tobacco Use Disorder on problem list
  - update enhanced motivational level
- Educational materials
  - Resources / Health and other consequences/benefits
- Psychosocial treatment
  - What can you integrate?
- Medication treatment
  - Monotherapy
  - Combination therapy
- Community resources
  - Peer Support Specialists / NicA
Strategies for Higher Motivated

● 7 FDA-approved medications
  → Five nicotine replacement therapies (NRTs)
    → Patch, gum, spray, lozenge, inhaler
    → Bupropion
    → Varenicline

● Psychosocial treatments
  → Cognitive-behavioral therapies
  → Mindfulness-based interventions
  → Social support

● Community resources
CBT: Relapse Prevention

- Identifying cues / triggers for substance use or cravings / thoughts
- Do an analysis of a “relapse”
- Goal to improve self-efficacy to avoid / handle specific people, places, things, moods, other addictive acts, etc
- Examples: Drug refusal skills, seemingly irrelevant decisions, managing moods / thoughts, and stimulus control

CBT = Cognitive Behavior Therapy
Integrating Mindfulness into Clinical Practice

- Enhanced Presence & Listening → Brief 5 minute Moments
- Mindfulness Based Stress Reduction (MBSR)
- Acceptance and Commitment Therapy (ACT)
- Mindfulness-Based Cognitive Therapy (MBCT)
- Dual Recovery Therapy (DRT)
- Dialectical Behavior Therapy (DBT) → “what” and “how” skills
- Mindfulness Based Relapse Prevention (MBRP) → Addiction Treatment & 12-Step Recovery
- Apps & websites & mp3s
Applied Mindfulness: RAIN

- **Recognize**
  → “I’m feeling anxious”

- **Accept/allow**
  → See if you are resisting the experience

- **Investigate**
  → “What’s happening in my body right now?”

- **Note**
  → Label or mentally note the body sensations from moment to moment

[http://www.mindful.org/mindful-magazine/craving-to-quit](http://www.mindful.org/mindful-magazine/craving-to-quit), Judson Brewer, MD, PhD author
Community Resources

● Quit lines (phone)
  → 1-800-QUIT-NOW

● Online (internet / apps)
  → www.becomeanex.org
  → www.quitnet.com
  → www.ffsonline.org

● Local treatment groups

● Nicotine Anonymous
  → In person meetings
  → Telephone meetings
  → Internet meetings
12-Step Facilitation

- Accepts disease model
- Encourages use of 12-Step social network, including sponsor and home group
- Coach “working their program”
- Fellowship and higher power are the agents of change - spirituality key
- Initial labeling of self as alcoholic is encouraged to address denial, minimization, and rationalization
- Abstinence model - loss of control with use
- Acceptance, Surrender, and Get Active
Is the Patient Working Their 12-Step Program?

- Working the steps
- Sponsor, mentor, or guide
- Group support and involvement
- Self-evaluation
- Spiritual Activity – Connection to Higher Power (prayer, meditation, ..)
- Daily reading or reflections
- Health care (recreation, exercise, diet, tobacco)
- Celebrate successes
- Being of service to others
Dual Recovery Anonymous

● Several different types of modified 12-step groups

● Recovery concepts supports increased sense of hope and connection to others

● Shared experience:
  → Experience, Strength, & Hope)

● 12-step phrases describe complex concepts in simple and easy way to remember
  → One day at a time
  → Stinking thinking
  → HALT (Hungry, Angry, Lonely, Tired)
  → Serenity prayer
Peer Support Specialists

- Consumer involvement on leadership committees, treatment, and engagement
- Genesis Club House
- www.NJChoices.org
- www.Rxforchange.org
- Wellness & Health Fairs
Principles of Pharmacology for Mental Illness in COD

- Avoid psychiatric medications with:
  - abuse liability
  - overdose risk
  - causing seizure
  - Sedation
  - liver toxicity

- Simplify dosing strategies (start low – go slow)
- Stress education and compliance
- Minimize refills
Principles of Pharmacology for COD

- Specificity of psychiatric & addiction disorders
- All medications are not created equal
  - Abuse liability - Benzos / Sedatives, Stimulants, Pain Medications
  - Safety - in general & when using substances
- Interaction with substances
  - Ex. MAOI & Stimulants
  - Few studies / lots of natural experiments
Co-Occurring Disorder Pharmacotherapy in Mental Health Settings

- Focus on treating the mental illness(es)
- Shared decision on psychiatric medication(s)
  - Prior treatment, side effect profile, family history
  - Likelihood of adherence
  - Substance Use / Addiction considerations
- Consider adding addiction treatment meds
  - Specific for treating an Alcohol, Tobacco & Other Drugs Use Disorder
  - Detox, Protracted Withdrawal, & Maintenance
Medication Treatments for COD in Addiction Settings

- Substance Detoxification
- Protracted abstinence
- Harm reduction / opioid agonists
- Co-occurring psychiatric disorders

- Helpful Alcoholics Anonymous Brochure to give patients going to 12-Step Meetings:
  
  → The AA Member: Medications and Other Drugs, 1984
Medication Algorithm Considerations

- Patient preference
- Past experience
  - Failed monotherapy attempts
  - Incorrect administration of medication
  - Multiple failed attempts
- Medical comorbidities
- Severity of withdrawal & dependence
- Breakthrough cravings
- Oral cravings/hand-to-mouth motion
- Weight gain concerns
Medication Algorithm

- **Monotherapy** (any of 7 FDA med choices)
  - → Varenicline
  - → Patch
  - → Oral NRT
  - → Bupropion

- **Combination pharmacotherapy**
  - → Multiple NRTS
    - → Patch and oral NRT
    - → Bupropion & NRT
Rationale NRT Replacement Pharmacology

- Each cigarette contains about 13 mgs nicotine
  → About 1 – 3 mgs of nicotine are absorbed per cigarette
- SMI tend to absorb the 2 – 3 mgs nicotine per cigarette
  → Higher CO and cotinine levels than expected
- Some practitioners and researchers match cotinine level to nicotine replacement dosage
- Example:
  → 3 packs per day = 20 cigarettes times 2 mgs per cigarette times 3 packs per day = 120 mgs nicotine
Smoking induces the P450 1A2 isoenzyme secondary to the polynuclear aromatic hydrocarbons.

Smoking increases metabolism of:
- Haloperidol, fluphenazine, olanzapine, clozapine, thioridazine, chlorpromazine, etc
- Caffeine is metabolized through 1A2

Check for medication side effects

Nicotine use alone (versus tobacco smoking) does not change medication blood levels (2D6).
- Nicotine replacement therapy (NRT) does not affect medication blood levels.
Reluctance to Prescribe Psychiatric Medications to Substance Abusers

- Worries about Toxic interaction
- Medication effect negated by drugs of abuse
- Manipulation
- Treating substance-induced symptoms
- Enabling
General Principles for the Use of Pharmacological Agents to Treat Individuals with Co-Occurring Mental and Substance Use Disorders

14 Principles for Prescribers

HHS Publication No. SMA-12-4689
