Teaching Research Data Management: An Undergraduate/Graduate Curriculum

Learning Objectives
- Identify the types of data
- Identify the various ownership levels of research data
- Describe the typical data life cycle
- Categorize data storage requirements in terms of size/amounts
- Evaluate and appraise data publishing and storage options
- Indicate the various descriptors of raw data
- Record project identifiers for specific research data
- Define various naming conventions
- Recognize data format importance for long-term access needs
- List and select various ways to assure the security of their data
- Recognize data privacy requirements
- Identify data sharing and reporting requirements

Introduction
The data management module focuses on various forms of data and the plan of the researcher to collect, store, retrieve and disseminate their data to collaborators according to policies and standards.

Life Cycle
Appropriate life cycles of specific research data are discussed in this module, along with the different time-dependent values of data and its management in different phases of its life cycle.

Security
This module employs various measures to establish adequate data integrity and protection. Including: keeping data safe from corruption and insuring that access to it is suitably controlled.

Naming Conventions
This module covers the importance of rules which when applied to data, could result in a set of data elements which are described in a standardized and logical fashion.

Sharing
Gaining timely access to data for scholarly research from any computer using a simple, universal set of protocols and formats – while respecting policies of funding agencies, institutions and publication venues.

Storage
Coding of words, descriptions, figures, still or moving images, and sounds into digital format and onto an array of repositories that can be accessed by authorized users with standard search protocols.

Describing & Accessing
This module covers the creation of descriptive, structural or administrative metadata for researchers' data with an emphasis on deciding how or who will create the metadata for a given set of research data.

Privacy & Restrictions
Information privacy and the relationship between the collection and dissemination of personally identifiable data are covered in this module.

Project Team
Steering Committee
UMMS: Elaine Martin, D.A.; Mary Plorun and Donna Kafel (Project Manager)
WPI: Tracy Leget-Homby and Siamak Najafi

Education Committee
UMMS: Lisa Palmer, Myrna Morales, David Lapointe and Patricia Franklin, WPI: Christine Drew, Laura Hanlan, Glenn Gaudente, John Sullivan and Erica Stults

External Consultants
Curriculum Design: Paul Colombo Evaluation Expert: Nancy LaFelle Instructional Design : Heather McMorrow
