Introduction

eScholarship@UMMS, a service of the Lamar Soutter Library, is a digital repository offering worldwide access to the scholarly output of the University of Massachusetts Medical School.

The collaboration between eScholarship and the International Medical Education Program was initiated by medical students interested in creating a database of international clinical and language/cultural experiences. Past trips reports were available in one office and in paper format, making it difficult for students to review clinical experiences matching their interests and education.

By archiving these trip reports in electronic form, eScholarship offers an efficient means of preserving student experiences, promoting international medical education and enabling the UMMS students to better serve a rapidly expanding immigrant and refugee population in Massachusetts and the United States.

Transformation & Value Added

Based on the current paper forms, the Library created an electronic record for each report and converted the paper-based supplemental materials into an electronic equivalent. The final database structure allows for searching full-text or browsing by country and year. This online “display case” is accessible to the UMMS campus community. Interested students can use the database to find available international sites and read about the experience of students who have visited a site previously.

Next Step: The next phase of the process is to have students enter their reports directly into the system. The Library will review the record and materials and add subject headings.

Reflections

The hospital where I was working was also unlike anything I had ever seen. All IMS is a large, public hospital and the most prestigious medical school in India. Since the institution is a public hospital, it provides practically free care to all of its patients, although I was surprised to find an additional “private ward” where the patients pay out of pocket where the conditions are quite a bit nicer than the general wards.

Maps

Visits by Continent

UMMS students have done clinical rotations or cultural immersion in 5 continents (23 countries) during 2003-2007. A total of 53 students have participated in the program.

Results

eScholarship@UMMS offers an efficient and convenient means of promoting student interest in international medical education. More than 50 student trip reports from over 20 countries have been entered into the database. In just four months the site has already had an impact and generated increased student interest.

“A fantastic resource for our medical students, who have been clamoring for something like this for years”
Dr. Mick Godkin, Ph.D., Director of International Medical Education
