The Perioperative Surgical Home (PSH): A New Paradigm in a Surgical Episode of Care

INTRODUCTION

- A Perioperative Surgical Home (PSH) is a patient-centered, physician-led, multidisciplinary, and team-based system of coordinated care for surgical patients.
- The PSH coordinates care and transitions from the decision to operate through the intra-operative course and return to primary care, using the anesthesiologist to coordinate care.
- The PSH model has been developed using the guiding principles of the PCMH, which focuses on coordinated care in the primary care setting.

OBJECTIVES

1. Enhance value and help achieve the triple aim of better patient experience, better health care, and lower costs.
2. Provide consistent seamlessness across the continuum.

METHODS

- Target population: Patients undergoing urologic cancer surgery.
- Collaboration between Departments of Urology and Anesthesiology, January 2015–June 2016.
- Quality improvement effort, focusing on each stage of the perioperative process: Pre-operative, intra-operative, post-operative, and post-discharge.
- Process improvements to standardize care, make care more person-centered, improve communication across surgical episode stages and with primary care.
- Process and Outcome measures, including complications, patient experience, costs, etc.
- Data collection from patient records and phone calls to patients.
- Process improvements to standardize care, make care more person-centered, improve communication across surgical episode stages and with primary care.
- Process and Outcome measures, including complications, patient experience, costs, etc.
- Data collection from patient records and phone calls to patients.

PSH: How is it Different? American Society of Anesthesiologists

- Process improvements to standardize care, make care more person-centered, improve communication across surgical episode stages and with primary care.
- Process and Outcome measures, including complications, patient experience, costs, etc.
- Data collection from patient records and phone calls to patients.

FUTURE STUDIES

- Continuation of PSH pilot to result in more robust process and outcome data.
- Possible expansion to more urologic surgical procedures and other disciplines.
- Integrating with ACO development.
- Solidifying new processes to be the standard of care.
